

Calicheck Linearity Test Kit

Accurately Tests Linearity in Less Than 10 Minutes

The innovative CALICHECK linearity test kit provides system testing of a dose calibrator in less than 10 minutes. The CALICHECK attenuates Tc-99m by known values.

Simulating decay for a range of a few hours up to 4 days, the CALICHECK eliminates the need to fractionate eluants or decay them for several days while periodically collecting data.

The unique design of 7 color-coded, lead-wrapped tubes allows for accurate testing. They are complete with their own storage container and record-keeping sheets with easy-to-follow instructions.

Features

- Performs linearity in <10 minutes
- Accurately simulates decay down to 10 μCi
- Results comparable to standard linearity tests
- Meets NRC and state standards
