

# CR/DR Test Tool

**Model L777**

## *Quick check on CR/DR imaging systems*

The CR/DR Test Tool is designed for the evaluation of filmless digital CR (Computed Radiography) and DR (Digital Radiography) imaging systems. The CR/DR tool is a valuable asset to the QA Technologist and the Medical Physicist for determining the source of an image quality problem or complaint.

This QA device incorporates a variety of testing parameters. When used daily, the model 777 tracks geometry (region of interest) symmetry, line pair resolution as well as low and high contrast performance. Measurements of the various targets allow for evaluation of both the monitor and printed film image.

The large 14" x 17" size makes it ideal for quick checks on automated chest systems.
